

## WOODEN POOLS STAINING SERVICE NOW AVAILABLE IN 4 COLORS

### Personalization from day one

From now, you can enjoy the pleasant, aesthetic, and favorite color of your pool right after its assembly.

### Protection and aesthetics

The stain is applied mechanically to each pool element, ensuring even coverage. For comprehensive wood protection, we recommend safeguarding with an appropriate hydrophobic product.

### Greenish tint elimination

Our staining reduces the greenish tint characteristic of class IV impregnated wood, giving it a more natural, harmonious appearance.

### Matching garden style

The color choice gives you full freedom to match the pool to your garden's style and color scheme, allowing you to create a coherent and elegant space.

### Standing out in the market

Our product distinguishes itself from other pools that remain only impregnated.

### Easier wood protection process

**Remember!** Every impregnated structure **must** be protected with high-quality wood products that provide a hydrophobic coating. For stained structures, we recommend a clear protective oil, which is faster and easier to apply.
